A new website on Asian ants

Ants of Borneo a virtual museum of natural history

This website is dedicated to the ants of Poring, Kinabalu National Park, Sabah, Malaysia, a tropical rainforest with the world's highest ant diversity: 642 species of ants from 82 genera and 8 subfamilies of the Formicidae have been found there. Our virtual museum of natural history is based on the comprehensive ant collection at the Department for Animal Ecology and Tropical Biology of the University of Würzburg. You look for ants? Go to antbase!

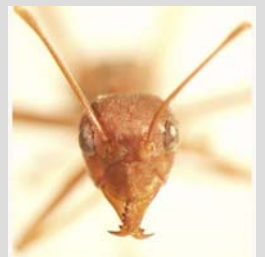

www.antbase.de

Check it out !

A marvellous kaleidoscope of ants :
248 species of ants are presented in more than
740 high resolution photographs !
Each species with a direct link to systematic information*
*in cooperation with www.antbase.org
A regularly updated identification tool for 63 ant genera

Call for contributions
The "AntBase" is no static website. Like in a real museum new specimens will arrive and additional geographical areas will be presented. We seek the cooperation with ant researchers and photographers of any other country to present their collections and research to the web community. We are looking for collaborators and invite taxonomists and ecologists, researchers and students to contribute to "AntBase".
